DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The disclosure is objected to because of the following informalities:
Page 5, paragraph [0027], line 10: The term "seal" should be corrected to read -- sealing ring --. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claim 1, claim line 1: The term "preferably" renders the claim indefinite because one is unclear whether the limitations following the term "preferably" are part of the claimed invention. See MPEP § 2173.05(d).

Allowable Subject Matter

5. The following is a statement of reasons for the indication of allowable subject matter:

Prior art was not relied upon to reject claims 1-16 because the prior art fails to teach and/or make obvious the following limitations:

Claims 1-11: Providing a sealing system, comprising at least one sealing ring and a depot for absorbing a leak, wherein a measuring device includes a condenser and the depot serves as a dielectric in combination with all of the remaining limitations.

Claims 12-16: Providing a leak detection system, comprising: a first sealing ring and a second sealing ring each including a condenser plate; and a depot disposed between the first and second sealing rings acting as a dielectric, wherein adsorption of a leaking material by the depot changes a dielectric property of said depot that is measured by the condenser plates in combination with all of the remaining limitations of the claim.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The prior art to US 4,505,186 (Meier et al.) discloses a lubricant monitoring system, wherein an element (12) which absorbs lubricant is provided on a piston rod. Absorption of the lubricant acts as a dielectric for a measuring capacitor located nearby.

The prior art to US 6,626,436 (Pecht et al.) discloses a monitoring seal system,

Art Unit: 2856

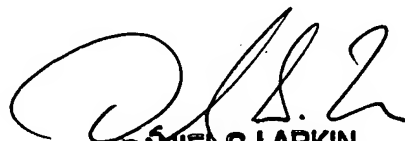

comprising a seal assembly (16) having at least one seal (26) and a temperature sensor (54) for sensing the temperature in the vicinity of the seal.
